

SalesPilot AI – End-to-End User Story

Introduction

SalesPilot AI is an AI-powered Sales Automation SaaS that helps organizations intelligently manage their sales pipeline. Instead of manually reviewing hundreds or thousands of leads, the platform automatically validates, scores, classifies, and routes leads to the most suitable Sales Members using machine learning and prescriptive business rules.

The platform has two user roles:

- **Admin** – Manages the organization, sales team, leads, and assignments.
- **Sales Member** – Manages assigned leads, follows up with prospects, and converts opportunities into customers.

The following story explains the complete journey through the platform.

1. Organization Registration

A company decides to use SalesPilot AI.

An organization representative visits the platform homepage and clicks **Register**.

Only Admin users are allowed to register directly.

During registration, the Admin provides:

- Company Name
- Full Name
- Email Address
- Password
- Admin Staff ID (ADM-XXX)

The system validates the Staff ID format and creates:

- The Organization
- The Admin account
- The organization's secure workspace

The Admin is automatically logged into the platform.

2. Initial Dashboard

After logging in, the Admin sees an empty dashboard.

The platform indicates that no sales team members or leads currently exist.

The Admin is guided through the onboarding process.

3. Building the Sales Team

The Admin opens **Team Management**.

Since no Sales Members exist yet, the Admin clicks **Invite Sales Member**.

The platform generates a secure invitation link.

The Admin sends this link to members of the sales team.

4. Sales Member Registration

A Sales Member receives the invitation.

They open the invitation link and complete registration.

They provide:

- Full Name
- Email Address
- Password
- Sales Staff ID (ST-XXX)

The system validates:

- Invitation token
- Staff ID format
- Email uniqueness

The Sales Member account is created and automatically linked to the Admin's organization.

At this stage, the Sales Member can log in but is not yet eligible for automatic lead assignment.

5. Configuring Sales Profiles

The Admin returns to **Team Management**.

Every newly registered Sales Member appears with a **Pending Configuration** status.

The Admin opens each Sales Member profile and configures:

- Sales Profile
- Industry Specializations
- Performance Rating
- Availability Status
- Auto Assignment Enabled

The system automatically derives the Sales Member's maximum lead capacity from their performance rating.

Example:

Performance Rating: 95

Maximum Capacity: 120 Leads

Once configured, the Sales Member becomes eligible to receive automatically assigned leads.

6. Uploading Leads

The Admin navigates to **Lead Upload**.

The organization uploads a CSV file containing new sales leads.

The platform automatically:

- Reads the file
- Validates required columns
- Detects formatting issues
- Rejects invalid records
- Standardizes the data
- Generates unique Lead IDs
- Stores validated leads

Only successfully validated leads proceed to the next stage.

7. AI Lead Scoring

Every validated lead is processed by the machine learning model.

The model analyzes multiple lead attributes and predicts the likelihood of conversion.

Each lead receives:

- AI Lead Score
- Conversion Probability
- Lead Tier (Hot, Warm, Cold)
- AI Priority
- Recommended Action

The scored leads are permanently stored in the organization's database.

8. Intelligent Lead Assignment

The Assignment Engine evaluates each scored lead.

For every Sales Member, it considers:

- Sales Profile
- Industry Specialization
- Availability
- Performance Rating
- Active Workload
- Utilization
- Organization Membership
- Auto Assignment Status

The engine assigns each lead to the most appropriate Sales Member.

Every assignment is recorded permanently.

9. Admin Monitoring

The Admin dashboard now becomes active.

The Admin can monitor:

- Total Leads

- Hot Leads
- Warm Leads
- Cold Leads
- Team Performance
- Assignment Distribution
- Conversion Forecast
- Pipeline Health
- Sales Member Utilization
- Available Capacity
- Team Workload

The Admin has complete visibility across the organization.

10. Sales Member Workspace

The Sales Member logs into the platform.

Unlike the Admin, the Sales Member sees a personal workspace.

Their dashboard displays only their own information, including:

- My Assigned Leads
- My Hot Leads
- Active Leads
- Available Capacity
- Utilization
- Follow-Ups Due Today
- Open Opportunities
- Closed Won
- Personal Conversion Rate

The Sales Member never sees organization-wide information.

11. Working Assigned Leads

The Sales Member opens **My Leads**.

Only leads assigned to them are visible.

They can:

- Search leads

- Filter leads
- View AI recommendations
- Open lead details
- Record activities
- Update pipeline stages
- Schedule follow-ups
- Add notes

The Lead Detail page becomes the Sales Member's primary workspace.

12. Managing the Sales Process

As work progresses, each lead moves through the sales pipeline.

Typical stages include:

- New
- Contacted
- Qualified
- Demo Scheduled
- Proposal Sent
- Negotiation
- Closed Won
- Closed Lost

Every update is recorded in the lead's activity timeline.

13. Handling Lead Outcomes

Every lead eventually reaches one of three outcomes.

Closed Won

The prospect becomes a customer.

The lead remains permanently stored for reporting, analytics, and historical records.

It no longer counts toward the Sales Member's active workload.

Nurturing

The prospect is not ready to buy yet.

The lead remains assigned to the same Sales Member.

A future follow-up is scheduled.

The lead temporarily leaves the active workload until it becomes active again.

Closed Lost

The opportunity is no longer viable.

The lead remains stored for reporting but no longer contributes to active workload calculations.

14. Dynamic Workload Management

As leads are completed or moved to nurturing, the system automatically recalculates each Sales Member's:

- Active Leads
- Utilization
- Available Capacity

Example:

Maximum Capacity: 120

Active Leads: 75

Available Capacity: 45

Utilization: 62.5%

These calculations update automatically without manual intervention.

15. Continuous Intelligent Assignment

When new leads are uploaded, the Assignment Engine reassesses the entire team.

Sales Members with:

- Active profiles
- Available status
- Remaining capacity
- Suitable expertise

receive new leads automatically.

Sales Members who are overloaded or unavailable are skipped.

This ensures balanced workload distribution across the organization.

16. Reporting and Analytics

Throughout the lifecycle of every lead, the platform continuously records:

- AI Scores
- Assignments
- Activities
- Pipeline Progress
- Follow-Ups
- Conversions
- Workload Changes
- Team Performance

The Admin uses this information to monitor performance, optimize operations, and make informed business decisions.

End-to-End Platform Summary

The complete SalesPilot AI workflow is:

Organization Registration

↓

Admin Creates Organization

↓

Sales Members Invited

↓

Sales Profiles Configured

↓

CSV Leads Uploaded

Lead Validation

AI Lead Scoring

Lead Classification

Intelligent Assignment

Sales Member Follow-Up

Pipeline Progression

Lead Outcome (Won, Nurturing, or Lost)

Automatic Workload Recalculation

Continuous Intelligent Lead Assignment

Reporting, Analytics, and Performance Monitoring

SalesPilot AI transforms the traditional sales process into an intelligent, AI-assisted workflow that helps organizations prioritize the right leads, distribute work fairly, improve sales productivity, and maintain complete visibility over every lead from initial upload to final outcome.
